PROJECTS

- 1. ORBIT - LIVE** *Spring Boot, Hibernate, Postgresql, React*
 - Built Orbit, a centralized job application tracking system, following **layered backend architecture**
 - Integrated **Spring Security** with session-based authentication and endpoint protection for secure REST APIs
 - Developed **dynamic query** based filtering and optimized CRUD operations for efficient database interactions.
 - Modeled relational entities using JPA with proper mappings and applied **DTO pattern** for clean API contracts.
 - Implemented state management using **Redux Toolkit** to store user details and job applications
- 2. DEVCHARGE - LIVE** *Node.js, REST APIs, MongoDB, React*
 - Developed a real-time developer matchmaking platform following a **backend first** development approach.
 - Built **13+ secure and structured APIs** with proper error handling and thoroughly tested using Postman.
 - Implemented **JWT** based user authentication with passwords securely hashed using **bcrypt**
 - A real-time **chat feature** between connections using WebSockets with chat room IDs encrypted via **crypto**.
 - Designed **pagination** logic using MongoDB skip and limit to improve query performance.
